

**Please write a short paragraph to describe your understanding of Data Visualization.**

Everyone can use data visualization in many different ways. Sometimes it can be challenging to explain to people a narrative, especially in decision-making. Creating visuals using data visualization can make getting specific key information points easier. This skill of creating visualizations is used in all companies worldwide to help make business decisions, show newer topics, show results of old choices, and more. We will make visuals with R-Studio and R-Programming language, which is how most big-data sets are handled. I think Data Visualization makes the world a simpler place as it describes complex ideas, issues, or effects in an excellent, easy-to-understand way,
